## Prototype-

## Testing - Elena Smith

We went through the screens of the apps and demonstrated it.

Notes - Generally good, but it would be useful to be able to see dates purchased on the products, for example how old the milk is. Another thing that may be useful is information about when a product could be delivered by before you order so you can make sure it will be here on time.

## Revised Prototype -

I will add a place on the order screen that shows you the last time you ordered an item after

you select an item, as well as an area before the “place order” button that will show the date to expect delivery. This should resolve both of the major issues that my user found.
